Hospital Performance Intelligence System

Dashboard Storyboard — Milestone 2

1. Hospital Overview

Purpose: Provide a high-level summary of hospital performance.

Visualizations:

- Total Admissions KPI
- Average Length of Stay KPI
- Estimated Bed Utilization KPI
- Admissions by Service bar chart
- Patient Satisfaction by Service bar chart

Key insight: Compare admission volumes and patient satisfaction across hospital services.

2. Patient Flow

Purpose: Understand patient demand and admission patterns.

Visualizations:

- Weekly Admissions Trend line chart
- Requests vs Admissions chart

Key insight: Identify weekly changes in admissions and differences between patient requests and admissions.

3. Department Analytics

Purpose: Compare performance across hospital services.

Visualizations:

- Department Efficiency Score bar chart
- Patient Satisfaction by Service bar chart

Key insight: Compare the project-defined efficiency score and patient satisfaction across services.

4. Resource Utilization

Purpose: Review available resources and estimated bed utilization.

Visualizations:

- Estimated Bed Utilization by Service bar chart
- Available Beds by Service bar chart

Key insight: Compare estimated bed utilization and bed availability across services.

Important data note: Bed utilization is an estimate because actual occupied-bed records are not available in the connected weekly dataset. The department efficiency score is a project-defined composite measure.

Planned Interactivity

- Filters for service and time period, where supported by the available data.
- Consistent titles, labels, and formatting.
- Clear navigation between dashboards.
- Comparisons across hospital services.

Expected Outcome

A four-dashboard Tableau prototype that presents hospital admissions, patient flow, service performance, patient satisfaction, and resource utilization in a clear and understandable format.
