MedTrack_DV – Dashboard Storyboard

Milestone 2 | Module 4: Dashboard Planning & Prototyping

Purpose

Plan four linked Tableau dashboards for hospital admissions, patient flow, department performance and resource utilization. The current supplied dataset supports admissions, hospital, condition, admission type, billing and length-of-stay analysis. Bed, staffing and department visuals require additional operational data.

1. Hospital Overview

Dashboard area	Planned content
Top KPI cards	Total Admissions | Average Length of Stay | Total Hospitals | Total Billing
Main visual 1	Monthly admissions trend (line chart)
Main visual 2	Admissions by admission type (bar chart)
Main visual 3	Admissions by medical condition (bar chart)
Filters	Admission date | Hospital | Medical condition | Admission type
Interactions	Selecting a hospital filters the other charts; reset filters control.

2. Patient Flow

Dashboard area	Planned content
Top KPI cards	Total Admissions | Total Discharges | Average Length of Stay
Main visual 1	Monthly admissions vs discharges (side-by-side bars)
Main visual 2	Length of stay distribution (histogram)
Main visual 3	Average stay by admission type (bar chart)
Filters	Admission date | Hospital | Admission type
Interactions	Select a month or admission type to filter the other views.

3. Department Analytics

Dashboard area	Planned content
Top KPI cards	Admissions by department | Department average stay | Department readmission rate
Main visual 1	Patient volume by department (bar chart)
Main visual 2	Average length of stay by department (bar chart)
Main visual 3	Readmission by department (bar chart)
Filters	Date | Department | Hospital
Data note	The current dataset has no department field or reliable patient ID. Add a department-level dataset and patient ID before building these measures.

4. Resource Utilization

Dashboard area	Planned content
Top KPI cards	Occupancy Rate | Bed Utilization | Staff Utilization
Main visual 1	Occupied vs available beds over time (line/area chart)
Main visual 2	Staff allocation by department (stacked bar chart)
Main visual 3	Equipment utilization by type (bar chart)
Filters	Date | Hospital | Department | Resource type
Data note	Requires bed capacity, occupied bed-days, staffing and equipment inventory/use data. These are absent from the current CSV.

Global Dashboard Design & Navigation

Use a consistent dark navy dashboard theme inspired by the sample on page 10 of the project brief. Place the MedTrack_DV title at the top, filters in a consistent left or top panel, KPI cards across the top, charts in the main canvas, and navigation buttons for Overview, Patient Flow, Department Analytics and Resource Utilization. Keep date and hospital filters consistent across dashboards.

Prototype validation checklist

■ All four dashboard tabs are present. ■ Titles and units are clear. ■ Filters work. ■ Selecting a chart filters related views where appropriate. ■ Reset filters works. ■ Unsupported KPIs are not displayed as real values until the required data is added.

Data limitations to resolve before final dashboard build

The supplied CSV includes no department, bed capacity, staff allocation, equipment inventory or unique patient ID. Do not estimate these fields from hospital name, room number or patient name. Add trusted operational datasets and a stable patient identifier before claiming department efficiency, occupancy, bed utilization or readmission rates.
